Effectively remove particles, water and varnish!

The SE series manufactured by Triple R Oil Cleaner I TRIS have been designed to purify and keep oil perfectly clean for applications with a system volume of approx. 6000 litres. The system ensures effective removal of all dirt particles, condensation and oxidation products (varnish) that cannot be removed with conventional filters.

How it works

The SE system is connected as a bypass and has its own motor-pump combination, making the SE series system suitable for pressureless applications. The SE pumps the oil through the filter housing, then back to the tank via a pressureless return.

Benefits

- Prevents defects in hydraulic systems
- Improves the reliability & productivity of your machines
- Extends the life of all hydraulic components, such as pumps, servo valves and seals
- Extends the life of the oil
- Extends the service life of standard filters
- Reduces maintenance costs
- Reduces oil consumption
- Reduces machine downtime

Technology

The oil is forced axially through the filter element by the motor-pump combination, with pressureless return.

The SE system is available in a range of models, including mobile configurations.

1st stage

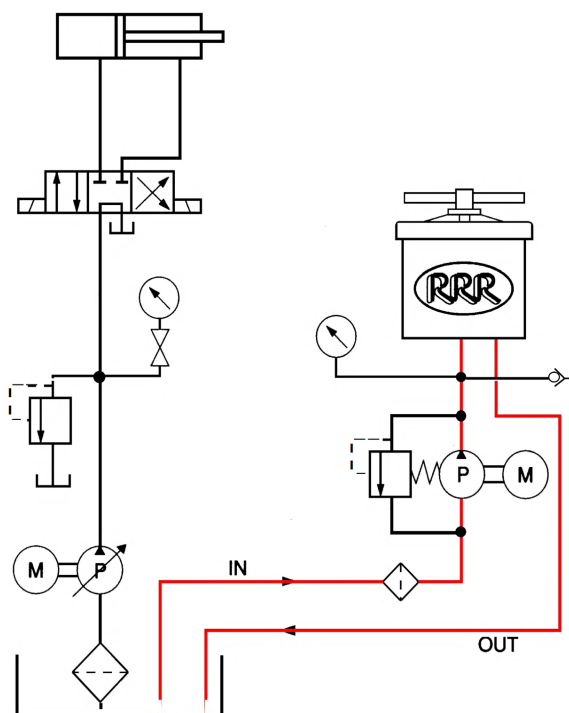

big particles are retained on the top of the filter

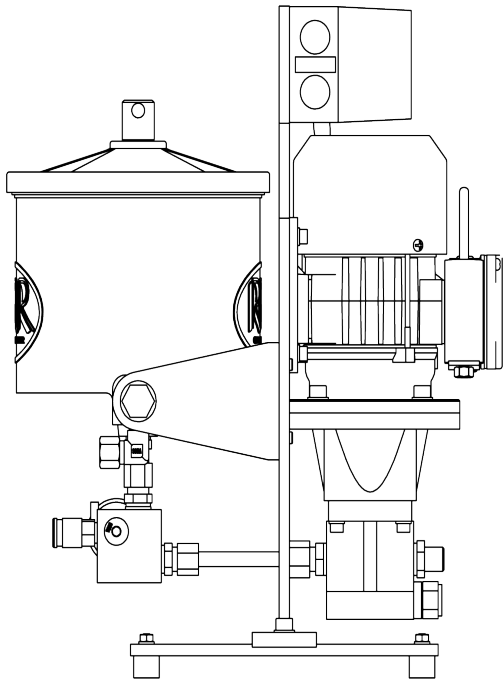

2nd stage

small particles are trapped in the mid stage of the filter element

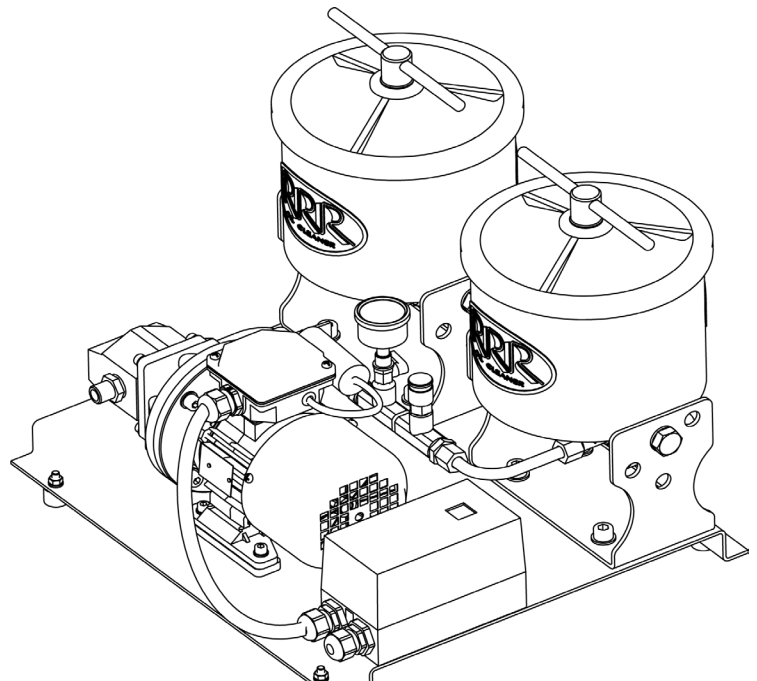

3rd stage

the smallest particles are trapped in the lower and compressed part of the filter.

TRIPLE R OIL CLEANER: SE SERIES EXAMPLES

**SE SERIES OFFLINE OIL CLEANERS ARE
PERFECT FOR:**

Gas turbines
Steam turbines
Gearboxes
Mobile Hydraulics
Generators
Injection Moulding Machines
General Hydraulics
Fueltanks
Glycol fluids
Compressor fluids
& much more!
